

### Client Information

Please complete and return this form at the time of service request.

The GIA Cultured Pearl Classification Report is an abbreviated report that provides classification information on unmodified cultured pearls. This dossier sized report includes a detailed classification of the submitted pearl(s) based on the GIA 7 Pearl Value Factors™ (size, shape, color, luster, surface, nacre and matching) as well as a digital image of the submitted item(s).

This service is specifically and exclusively for the three major types of cultured pearls (Akoya, South Sea and Tahitian pearls), with no identification or advanced testing of the pearl(s) being performed. **If a pearl is found by GIA gemologists as being modified by treatment (except routine processes) or as not belonging to one of the accepted pearl types, the pearl service will automatically change to a Pearl Identification Service.**

Submitted pearls may be loose, mounted, strung, or in a fixed design layout for a strand or jewelry item. Maximum of 10 related loose pearls per report or one item of jewelry or layout (i.e. necklace, pair of earrings, ring, brooch, etc.).

See Fee Schedules for current fee applied for each report type at [GIA.edu/gem-lab-fee-schedule](http://GIA.edu/gem-lab-fee-schedule). For service-related questions, please contact your Client Service Representative or email [labservice@gia.edu](mailto:labservice@gia.edu)
